Advanced Budgeting Workshop

Introduction

This course is considered the second level in budgeting, following our "Effective Budgeting and Cost Control" program. It moves beyond the theory of budgeting as a concept and delves into specific steps to make budgeting a value-added process in the organization. By building user-friendly models and applying scenario analysis, management will spend less time gathering data and more time analyzing it for informed decision-making. Several Microsoft Excel tools are used throughout the course, making it practical and providing participants with the skills to apply the tools immediately in their organizations. These tools include 'what-if' analysis, solver, and many others.

Course Objectives

By the end of this course, participants will be able to:

- Create budget templates and models for their departments or organizations.
- Apply various forecasting techniques to manage uncertainties in budgeting.
- Evaluate capital budgeting decisions using several methods and recommend proper actions.
- Utilize Microsoft Excel functions and tools in the budgeting process.
- Evaluate the budgeting process in their organization and recommend improvements.

Course Outlines

Day 1: Budgeting and Planning

- Budget and management functions.
