BLACKBIRD FOR TRAINING

Certified Information Systems Auditor (CISA) – ISACA

Certified Information Systems Auditor (CISA) – ISACA

Introduction

The Certified Information Systems Auditor CISA certification by ISACA is one of the most prestigious and globally recognized credentials in information systems auditing, control, and assurance.

This course is designed to prepare participants for the CISA certification exam by providing a comprehensive understanding of information systems audit, IT governance, risk management, and security frameworks.

Through practical examples and real-world case studies, participants will gain the knowledge and confidence to evaluate, monitor, and protect organizational information systems effectively.

The program focuses on international standards, best practices, and professional techniques required to perform high-quality audits and strengthen governance across digital environments.

Course Objectives

By the end of this course, participants will be able to:

- Understand the principles and practices of information systems auditing.
- Apply ISACA's global standards and frameworks in audit execution.
- Identify and assess IT-related risks and their impact on business operations.
- Evaluate the design and effectiveness of technical and operational controls.
- Ensure compliance with organizational policies and regulatory requirements.
- Develop audit programs and plans based on risk assessment.
- Prepare accurate and professional audit reports with actionable recommendations.
- Confidently prepare for and pass the CISA certification exam.
