IT Project Management

Introduction

In the rapidly evolving landscape of technology, IT project management stands as a critical skill for ensuring project success and organizational growth. Managing IT projects requires a unique blend of technical knowledge, strategic thinking, and leadership skills. This course, "Advanced IT Project Management", is designed to equip participants with the expertise needed to navigate the complexities of IT projects effectively.

Through case studies, role-plays, and interactive group exercises, participants will gain insights into the lifecycle of IT projects, from initiation to closeout. The course also incorporates pre-and post-testing to ensure comprehensive learning and measurable outcomes. Whether you are new to the field or seeking to advance your skills, this course offers a structured approach to mastering IT project management.

Course Objectives

By the end of this course, participants will be able to:

- Understand what IT project management is and the methodologies it employs.
- Apply advanced IT project management techniques to ensure project success.
- Develop a robust business case for IT projects, ensuring justification and feasibility.
- Master IT project manager skills needed to align project objectives with stakeholder needs.
- Gain proficiency in both predictive and agile methodologies for IT project planning and execution.
- Execute key activities across the project lifecycle, including design, implementation, and delivery.
- Understand the duties and responsibilities of an IT project manager during various project phases.
- Prepare for industry-recognized IT project management certifications to enhance career growth.

Course Outlines

Day 1: Overview of IT Project Management

- What is IT project management?
- Differences between IT projects and other types of projects.
- Common risks in IT project management.
- Understanding the system development life cycle SDLC.
- Exploration of models:
 - Waterfall model
 - Incremental model
 - Basic iterative model
 - Agile development model

Day 2: Project Concept

- Developing a compelling business case.
- Identifying and engaging stakeholders effectively.
- Establishing conceptual solutions for IT projects.
- Crafting a comprehensive project charter.
