Software Testing Foundation (Based on ISTQB v4.0 Framework)

Introduction

Delivering reliable and high-quality software has become essential in today's technology-driven environment. As systems grow more complex, the need for structured, efficient, and well-designed testing processes becomes a critical element of successful software development. The Software Testing Foundation Based on ISTQB v4.0 Framework course provides a comprehensive understanding of testing fundamentals, principles, and best practices that align with global quality standards.

This 5-day program offers a balanced combination of theoretical concepts and practical application. It helps participants understand the role of testing in software development, explore essential test design techniques, manage defects efficiently, and apply testing strategies across different development models—including Agile, DevOps, and traditional lifecycles.

The course is ideal for professionals seeking to strengthen their testing capabilities, develop practical quality-assurance skills, and enhance their ability to contribute effectively to software projects. By the end of the program, participants will gain a solid foundation that supports structured thinking, accurate defect analysis, and quality-driven decision-making.
