Cash Forecasting and Liquidity Management

Introduction

The Cash Forecasting and Liquidity Management course is designed to strengthen the ability to understand, forecast, monitor, and manage an organization's cash position with greater accuracy and control.

Liquidity is one of the most critical elements of financial stability. It directly affects an organization's ability to meet obligations, fund operations, manage payments, respond to market changes, and avoid unexpected financial pressure. Effective liquidity management is not limited to checking bank balances. It requires a clear understanding of cash inflows, cash outflows, collection cycles, payment schedules, working capital movements, funding needs, and potential liquidity risks.

This five-day course provides a practical and structured approach to cash forecasting and liquidity management. It begins with the fundamentals of cash flow and liquidity, then moves into forecasting methods, working capital analysis, liquidity risk management, scenario planning, reporting, and decision support.

The course helps participants build stronger forecasting discipline, improve cash visibility, identify liquidity gaps early, and develop practical tools that support financial planning and operational decision-making.

Course Objectives

By the end of this course, participants will be able to:

- Understand the core concepts of cash flow and liquidity management.
- Differentiate between profitability, cash availability, and financial stability.

Conclusion

The Cash Forecasting and Liquidity Management course provides a practical framework for understanding cash movement, preparing accurate forecasts, and making informed decisions that protect and improve liquidity.

The program begins with the foundations of cash flow, liquidity, and the difference between profit and cash availability. It then moves into cash forecasting based on operational data, collections, payment schedules, and financial commitments.

The course also addresses working capital management, the cash conversion cycle, liquidity risk, scenario planning, and response strategies for both cash shortages and surplus liquidity. The final day connects all components through cash reporting, liquidity dashboards, management communication, and the preparation of an integrated liquidity management plan.

By the end of the course, participants will be better prepared to forecast cash flows, monitor liquidity, identify risks, improve working capital performance, and build practical reporting tools that support financial stability and stronger organizational decision-making.
