Environmental Sustainability & Climate Change Management

Ref: 3255365_339466 **Date:** 3 – 7 May 2027 **Location:** Barcelona (Spain) **Fees:** 5900 GBP

Introduction

Environmental challenges have become one of the most pressing issues facing organizations today. As the global focus shifts toward sustainable growth, Environmental Sustainability & Climate Change Management has emerged as a core competency for corporate leaders.

Sustainability is no longer an optional initiative — it's a strategic imperative that defines resilience, competitiveness, and long-term success.

This course provides participants with practical tools to understand environmental risks, manage carbon emissions, and integrate sustainability principles into every level of business operations.

Through a structured approach, it enables leaders to align economic objectives with environmental responsibility and drive sustainable impact within their organizations.

Course Objectives

- Understand the core principles of environmental sustainability and climate change.
- Analyze the impact of business operations on ecosystems and natural resources.
- Apply strategies to reduce carbon emissions and enhance resource efficiency.
- Develop institutional policies aligned with sustainability and ESG goals.
- Build risk management plans to adapt to environmental and climate challenges.
- Learn how to apply international sustainability and reporting standards.
- Integrate sustainability objectives into strategic and operational planning.
- Explore real-world case studies of successful climate and sustainability initiatives.

Course Outlines

Day 1: Introduction to Sustainability and Climate Management

- Defining environmental sustainability and its relevance to corporate performance.
- Understanding the link between economic growth and environmental protection.
- Exploring global environmental challenges and their business implications.
- Reviewing the UN Sustainable Development Goals SDGs framework.
- Identifying key sources of emissions and ecological impact within organizations.
- Practical session: Assessing your organization's environmental performance.

Day 2: Environmental Risk Assessment and Climate Adaptation

- Classifying environmental risks and their impact on operations and supply chains.
- Using data analytics to evaluate climate-related vulnerabilities.
- Developing climate adaptation and resilience strategies.
- Applying Life Cycle Assessment LCA for product and service evaluation.
- Tools and methodologies for environmental risk analysis.
- Workshop: Building an environmental risk assessment model.

Day 3: Carbon Management and Energy Efficiency

- Understanding carbon accounting and greenhouse gas GHG measurement.
- Implementing emission reduction strategies and energy optimization programs.
- Integrating renewable energy into corporate operations.
- Applying standards such as ISO 14064 and the GHG Protocol.
- Promoting internal sustainability awareness and behavioral change.
- Hands-on exercise: Creating a corporate carbon management plan.

Day 4: Circular Economy and Sustainable Resource Strategies

- Introduction to the circular economy and its business applications.
- Designing processes that maximize resource reuse and waste reduction.
- Evaluating supply chain sustainability and life-cycle efficiency.
- Building innovative waste management and recycling initiatives.
- Encouraging cross-functional collaboration to achieve environmental goals.
- Case study: Implementing a corporate circular economy model.

Day 5: Sustainability Reporting and Continuous Improvement

- Preparing sustainability and climate performance reports GRI, SASB, TCFD.
- Tracking and analyzing environmental, social, and governance ESG indicators.
- Measuring environmental return on investment EROI.
- Establishing systems for continuous monitoring and improvement.
- Enhancing transparency through effective stakeholder communication.
- Final session: Presentation of applied sustainability and climate strategies.

Why Attend this Course: Wins & Losses!

- Gain a comprehensive understanding of modern environmental management.
- Strengthen leadership in sustainability planning and carbon governance.
- Enhance competitiveness by integrating green strategies into operations.
- Improve efficiency and reduce operational costs through resource optimization.
- Achieve compliance with international environmental and ESG standards.
- Build organizational credibility with investors and stakeholders.
- Learn to apply globally recognized sustainability assessment tools.
- Benefit from case-based learning and practical frameworks.

Conclusion

The Environmental Sustainability & Climate Change Management course underscores the critical role of forward-thinking leadership in addressing today's environmental challenges. By embedding sustainability principles into strategic and operational frameworks, organizations can minimize their environmental footprint, boost efficiency, and achieve long-term growth.

This program provides a practical roadmap for transforming environmental responsibility into measurable results, turning potential risks into opportunities for innovation and resilience. With the right strategies and tools, any organization can achieve a balance between economic success and environmental stewardship — paving the way toward a sustainable and climate-resilient future.
