Introduction

The DMBok and CDMP Preparation: Data Management Fundamentals program is a comprehensive professional training course designed to build a strong and practical foundation in data management while preparing participants for the Data Management Body of Knowledge DMBok exam and the globally recognized Certified Data Management Professional CDMP certification.

This program addresses the growing organizational need for structured, reliable, and governed data in an increasingly data-driven environment. It focuses on the core principles that govern data management within organizations, including data governance, data quality, metadata management, data integration, and data security.

By combining conceptual frameworks with real-world applications, the course supports professionals in strengthening data management strategies, addressing operational challenges, and progressively building the exam readiness required to successfully pass the CDMP certification examination. The learning journey is structured to move from foundational concepts to focused exam preparation, ensuring both practical competence and certification success.

Course Objectives

This program is designed to build strong foundational knowledge and certification readiness in data management. By the end of the course, participants will be able to:

- Understand the fundamental principles of data management and their practical application within organizations.
- Acquire the required knowledge to prepare for the DMBok exam and achieve the CDMP certification.
- Apply best practices in data governance, data quality, metadata management, and data security.
- Develop effective strategies to enhance enterprise-wide data management capabilities.
- Demonstrate readiness to successfully pass the Certified Data Management Professional CDMP exam.

Course Outlines

The course is structured across five intensive days, covering all essential knowledge areas required for both professional practice and certification preparation:
