Value Engineering & Cost Estimating

Code: PM28 From: 20 - 24 April 2026 City: Madrid (Spain) Fees: 4400 Pound

Introduction

Value Engineering VE is a systematic and disciplined approach aimed at maximizing the value of a project through cost optimization without compromising essential functions. Originally introduced over 70 years ago in the manufacturing sector, value engineering has since evolved and been widely adopted across various industries to improve both initial and long-term investment outcomes. Unlike typical design reviews or cost-cutting initiatives, value engineering focuses on a creative, organized effort that evaluates the essential functions of a project to achieve the desired results at the lowest possible total costs, covering aspects like capital, staffing, energy, and maintenance. The value engineering process is ideally applied early in a project, although it can be integrated at any stage, including construction. By employing multi-disciplinary teams, value and cost-efficiency are enhanced through the exploration of alternative designs, materials, and methods. The result is the removal of unnecessary expenditures, improving both engineering cost analysis and overall project efficiency.
