Introduction

In an age where digital systems shape nearly every aspect of business operations and daily life, the need for strong security, regulatory compliance, and effective identity management has become more important than ever. The SC-900: Security, Compliance, and Identity Fundamentals course is a comprehensive one-week training program designed to provide participants with a clear understanding of these essential areas and how they work together to protect organizations in today's digital environment.

This course is ideal for individuals who want to begin their journey in cybersecurity or strengthen their foundational knowledge of security, compliance, and identity concepts. It introduces the core principles behind cybersecurity defense, data protection, privacy regulations, and identity and access management, while also preparing participants to understand the value and structure of the SC-900 certification. Through a practical and structured approach, participants will build the confidence needed to navigate security challenges and support secure digital operations.

Course Objectives

By completing the SC-900 course, participants will be able to:

- Understand the core concepts of security, compliance, and identity in modern digital environments.
- Recognize common cybersecurity threats and apply basic defense and protection strategies.
- Explore major compliance frameworks and understand their role in protecting privacy and data.
- Understand the fundamentals of Identity and Access Management IAM, including authentication, authorization, and governance.
- Identify key tools and technologies used in security, compliance, and identity management.
- Apply best practices for protecting sensitive information, digital assets, and user identities.
