Project Analysis: Tools & Techniques for Managing Risk & Uncertainty

Code: LM28 From: 5 - 9 January 2026 City: Geneva (Switzerland) Fees: 4700 Pound

Introduction

Large, capital-intensive projects across industries require substantial investments and come with significant risks. These risks span the entire lifecycle of the project, from initial acquisition and exploration to long-term operation and maintenance of organizational assets. Effective project analysis and management are crucial in determining whether to proceed with such ventures, ensuring that decisions are data-driven and based on solid risk assessment.

During the exploration phase of a project, whether it involves new development or expanding an existing operation, it is vital to evaluate various factors using advanced project analysis techniques. The goal is to assess risks under uncertainty and determine the likelihood of success or failure. This analysis forms the foundation for making informed decisions about whether to move forward with development or abandon the initiative.

Comprehensive and systematic project analysis and evaluation are essential for reducing uncertainty and maximizing potential returns. By creating detailed cash-flow analyses, businesses can better predict financial outcomes over the project's lifecycle, particularly under fluctuating conditions. Accurate cash flow projections that account for both capital expenditures CAPEX and operational expenditures OPEX are key to long-term success.

The unfortunate reality is that many large-scale projects fail to meet budget expectations, often leading to higher-than-planned costs and strategic shortfalls. These failures are often caused by a lack of development planning and project analysis. Without the use of modern project analysis methods and financial planning tools, organizations risk missing financial and strategic goals, which can result in significant losses.

Course Objectives

This course is designed to equip participants with essential skills in project analysis and management, focusing on decision-making tools and techniques that help organizations succeed in large capital-intensive projects. By the end of this course, participants will be able to:
