Code: OG28 From: 11 - 15 November 2024 City: Boston (USA) Fees: 5700 Pound

## Introduction

Mechanical engineering is at the center of the chemical, oil, gas, and petrochemical industries. It requires familiarity not only with sound engineering principles, but also with other engineering techniques including inspection, monitoring, and condition evaluation. The mechanical engineer is interested in safe containment and movement of solids, liquids, and gases. Of specific importance are material properties, design, static & rotating equipment design, inspection, and repair as well as an understanding of maintenance strategies and condition monitoring

## Course Objectives Fundamentals of Mechanical Technology

- Perform NDE Non-Destructive Examination for static and rotating equipment
- Select proper materials for static and rotating equipment
- Understand the principle of operation and design for this equipment
- Protect the equipment from corrosion
- Identify different mode failures of static and rotating equipment
