Code: OG28 From: 11 - 22 May 2026 City: Baku (Azerbaijan) Fees: 8600 Pound

Introduction

Effective maintenance planning, scheduling, and control are crucial to ensuring the sustainability and efficiency of operations in any organization. The Maintenance Planning, Scheduling, and Control course is designed to equip participants with the latest concepts and techniques needed to organize and manage maintenance activities efficiently and accurately.

This course begins with an introduction to the objectives of maintenance and its evolution, followed by a review of work order systems and task prioritization. It then covers the implementation of preventive maintenance, the creation of appropriate programs, and scheduling. Key topics such as resource management and equipment life cycle costs are also discussed, along with material planning and workplace safety. The course concludes with an emphasis on the control of maintenance operations through performance measurement and the use of effective Key Performance Indicators KPIs.

The course's ultimate goal is to enhance the efficiency and performance of the maintenance department and ensure that maintenance is executed systematically, effectively, and safely.
