## Introduction

The Advanced Observability and Site Reliability Engineering SRE course is a comprehensive training program designed for IT professionals aiming to master modern IT environments. These environments are increasingly characterized by microservices, cloud-native architectures, and distributed systems. This site reliability engineering course merges the core principles of observability with site reliability engineering principles, offering a holistic approach to building scalable, resilient, and secure systems. Participants will dive into observability engineering, exploring state-of-the-art tools, methodologies, and techniques for enhancing site reliability engineering monitoring, streamlining incident management, and fostering a culture of reliability within their organizations.

## Course Objectives

- Understand Observability: Gain a practical understanding of what is observability, its meaning, and why it's essential in modern IT landscapes.
- Master the Three Pillars of Observability: Explore how to apply the three pillars of observability—metrics, logs, and traces—in microservices-based and containerized environments.
- Implement Open Telemetry: Learn to implement Open Telemetry standards to enable seamless distributed tracing and foster innovation.
- Observability Maturity Model: Understand and apply the Observability Maturity Model to measure and enhance your observability strategy.
- Integrate Full-Stack Observability: Discover how to integrate full-stack observability and distributed tracing into DevSecOps practices.
- Proactive Incident Management with AIOps: Learn how to shift from reactive to proactive incident management using AIOps, a key component of site reliability engineering solutions.
- Network & Container-Level Observability: Implement network and container-level observability with a security-first approach.
- DataOps for Clean Observability Pipelines: Tackle data challenges and build clean observability pipelines using DataOps principles.
- DevSecOps Integration: Incorporate DevSecOps wisdom into your observability practices for enhanced security and efficiency.
- Enhance System Reliability: Apply site reliability engineering skills and observability practices to improve system reliability, uptime, and performance.
