Code: IT28 From: 29 June - 10 July 2025 City: Online Fees: 4000 Pound

Introduction

In today's fast-paced digital landscape, data centers form the backbone of enterprise operations, housing critical IT infrastructure and supporting mission-critical services. Effective data center management is essential for ensuring reliable, secure, and optimal performance of IT services. This advanced certified course in data center management is crafted to provide participants with the latest knowledge, skills, and best practices in managing data center operations. Through a combination of theory and hands-on exercises, participants will gain insights into industry-leading methodologies and data management solutions to efficiently operate data center environments.

Course Objectives

- Provide a comprehensive understanding of data center management principles, methodologies, and frameworks.
- Equip participants with advanced skills in planning, designing, and operating data center facilities that align with organizational needs and industry standards.
- Explore emerging trends and technologies in data management services, such as virtualization, cloud computing, and data center automation, and their impact on data center operations.
- Foster proficiency in implementing best practices for optimizing data center performance, energy efficiency, and environmental sustainability.
- Develop skills in assessing and mitigating data center risks, including cybersecurity threats and compliance with regulations.
- Enhance knowledge in disaster recovery and business continuity planning to ensure high availability and resilience.
- Provide hands-on experience with data center management tools, monitoring systems, and real-world case studies.
- Prepare participants for certifications in data center management, such as the Certified Data Center Management Professional CDCMP, through comprehensive exam preparation.
