LabVIEW and TestStand

Code: IT28 From: 14 - 18 July 2025 City: Lyon (France) Fees: 4900 Pound

Introduction

The Advanced LabVIEW and TestStand Course is a comprehensive program designed to provide participants with a thorough, modern understanding of LabVIEW and TestStand. Covering the latest features and techniques, this course equips participants to develop advanced applications and automated test systems efficiently. Through hands-on exercises and real-world examples, participants will acquire essential skills to design, develop, and deploy sophisticated LabVIEW applications and TestStand test sequences, preparing them for excellence in LabVIEW development and TestStand automation.

Course Objectives

- Acquire advanced knowledge of LabVIEW and TestStand features and capabilities: Gain a deep understanding of both tools' features and applications to tackle complex projects in LabVIEW development and TestStand automation.
- Understand best practices for LabVIEW and TestStand development: Learn strategies for efficient LabVIEW programming and TestStand project management, reducing errors and enhancing productivity.
- Develop proficiency in designing and implementing complex LabVIEW applications: Build scalable and modular architectures to meet large-scale project requirements.
- Gain expertise in integrating LabVIEW applications with TestStand: Master the integration of LabVIEW functions into TestStand sequences for streamlined automation.
- Master the creation of automated test sequences using TestStand: Understand how to create customized and automated TestStand sequences.
- Explore advanced debugging and troubleshooting techniques: Improve debugging skills in both LabVIEW and TestStand to ensure optimal system performance.
- Optimize LabVIEW and TestStand performance for large-scale systems: Implement strategies to maximize efficiency in LabVIEW and TestStand for robust and reliable applications.

Course Outlines

Day 1: Advanced LabVIEW Topics

- Introduction to advanced LabVIEW programming concepts
- Advanced data types and structures
- Advanced file I/O and data storage
- Debugging and profiling tools in LabVIEW

- User interface development and error-handling techniques

Day 2: LabVIEW Architectures and Design Patterns

- Overview of LabVIEW architectures and design patterns
- Modular programming and event-driven design
- LabVIEW project management and performance optimization
- Designing scalable LabVIEW applications

Day 3: LabVIEW and TestStand Integration

- Creating LabVIEW-based TestStand steps and sequences
- Configuring communication protocols between TestStand and LabVIEW
- Error-handling and report customization in TestStand
- Customizing TestStand interfaces with LabVIEW integration

Day 4: Advanced Topics in TestStand

- Developing complex TestStand sequences and code modules
- Customizing TestStand reports and result logging
- Advanced debugging techniques in TestStand
- TestStand deployment and maintenance practices

Day 5: Advanced Applications of LabVIEW and TestStand

- Real-time programming in LabVIEW
- Applications of LabVIEW and TestStand in industrial automation
- Exploring emerging trends in LabVIEW development and TestStand automation

Conclusion

This course is designed to refine participants' expertise in LabVIEW and TestStand development, with a focus on advanced integration techniques, automation, and performance optimization. With the training provided, participants will be well-prepared to develop and implement advanced applications using LabVIEW and TestStand, enhancing their skills and competitiveness in automated testing and development.
