Plate Heat Exchangers: Design, Performance, and Maintenance

Code: OG32 From: 26 - 30 July 2026 City: Dubai (UAE) Fees: 4900 Pound

Introduction

Plate heat exchangers are among the most widely used technologies for heat transfer in various industrial sectors, including refrigeration, HVAC, chemical processing, food and beverage, and energy. Due to their high efficiency, compact size, and ease of maintenance, they have become the preferred solution for many industrial applications.

This theoretical course is designed to equip participants with a mechanical background with a comprehensive understanding of the design, operation, and maintenance principles of plate heat exchangers. The course enables them to evaluate performance, identify common issues, and interpret technical manuals and system diagrams effectively.

Course Objectives

By the end of this course, participants will be able to:

- Understand the working principles and different types of plate heat exchangers.
- Identify industrial applications for various types of plate heat exchangers.
- Grasp key thermal and hydraulic performance concepts.
- Become familiar with commonly used materials and quality standards.
- Develop skills in reading technical datasheets and installation diagrams.
- Recognize common failures and understand basic maintenance principles.
- Gain insight into the latest technologies and trends in the field.
