Financial Analysis and Forecasting Techniques

Ref: 3255079_186878 **Date:** 9 – 13 August 2027 **Location:** Toronto (Canada) **Fees:** 5900 GBP

Introduction

In today's unpredictable financial landscape, mastering Financial Analysis Forecasting Techniques is essential for leaders, analysts, and decision-makers. These techniques are not only tools for prediction but also strategic instruments that drive sound financial planning, investment decisions, and risk mitigation across industries.

This course is designed for executives, team leaders, and professionals from various sectors including energy, banking, telecommunications, public administration, HR, project management, marketing, and more. Whether you're a finance specialist or a strategic planner, developing proficiency in financial forecasting will significantly enhance your analytical edge and decision-making power.

Participants will explore real-world forecasting applications, modern analytical tools, and best-in-class practices that support proactive, data-driven financial leadership.

Course Objectives

- Understand the key principles and goals of financial forecasting and analysis.
- Apply quantitative and qualitative forecasting methods to different business contexts.
- Analyze financial statements to derive actionable insights.
- Use trend, regression, and time series models for forecasting accuracy.
- Integrate macroeconomic indicators into financial planning.
- Build financial models using Excel and forecasting software.
- Detect early warning signs through variance and ratio analysis.
- Evaluate investment opportunities using forecasted cash flows.
- Align financial forecasting with budgeting and strategic planning.
- Communicate forecasts effectively to stakeholders through clear visual reports.

Course Outlines
