# Advanced Problem Management: Root Cause Analysis, Service Reliability & Continuous Improvement

Code: IT32 From: 1 - 5 March 2027 City: Düsseldorf (Germany) Fees: 5900 Pound

## Introduction

The Advanced Problem Management: Root Cause Analysis, Service Reliability & Continuous Improvement Course is designed to provide professionals with a comprehensive understanding of structured problem management practices and the methodologies used to identify, analyze, and eliminate the root causes of recurring operational and service-related issues. While incident response focuses on restoring normal operations as quickly as possible, effective problem management aims to prevent recurrence, improve service reliability, and support long-term operational stability.

Designed for executives, managers, team leaders, IT professionals, operations personnel, service management practitioners, and specialists across various industries, this course provides a practical framework for identifying underlying causes of service disruptions and implementing sustainable corrective actions. Participants will learn how to investigate recurring issues, perform root cause analysis, manage known errors, and establish proactive improvement initiatives that enhance organizational performance.

Through practical exercises, case studies, workshops, and real-world scenarios, participants will develop the skills needed to strengthen service reliability, reduce operational disruptions, improve decision-making, and support continual improvement efforts across their organizations.
