ITIL 4 Practitioner: Problem Management

Code: IT28 From: 24 - 28 May 2026 City: Cairo (Egypt) Fees: 4000 Pound

Introduction

Problem Management is one of the key practices within the ITIL 4 Practitioner framework, focusing on identifying and eliminating the root causes of recurring incidents to prevent future disruptions. Unlike Incident Management, which aims to restore service quickly, Problem Management addresses underlying issues to ensure long-term service stability.

This course is designed for executives, team leaders, IT professionals, and specialists across various departments including human resources, project management, finance, telecommunications, and government within the Middle East and North Africa region.

Over five days, participants will gain the skills and tools needed to investigate complex issues, implement effective permanent fixes, and improve service quality, resulting in reduced downtime and enhanced organizational performance.

Course Objectives

- Understand the core principles of Problem Management within ITIL 4 Practitioner.
- Differentiate between problems, incidents, and known errors.
- Apply root cause analysis RCA techniques effectively.
- Create and maintain a known error database KEDB.
- Develop strategies to prevent problem recurrence.
- Integrate Problem Management with Incident and Change Management practices.
- Establish KPIs for tracking problem resolution effectiveness.
- Implement continuous improvement measures for long-term service reliability.
