Clinical Documentation Improvement (CDI) and Its Role in Enhancing Healthcare Quality

Code: HM32 From: 8 - 12 February 2027 City: Lyon (France) Fees: 5900 Pound

Introduction

Clinical Documentation Improvement (CDI) has become a fundamental pillar in modern healthcare systems, as accurate and complete medical documentation directly influences the quality of care, patient safety, and the overall performance of medical institutions. In hospitals, clinics, laboratories, pharmacies, and administrative departments, the accuracy of medical records determines the effectiveness of clinical decisions, continuity of care, and the ability to detect errors or gaps in patient information.

This program is designed for healthcare professionals seeking to strengthen their capability to collect, document, and verify medical information with a high degree of accuracy. It offers a structured methodology that supports medical teams in improving the completeness and clarity of clinical data, enhancing communication between departments, reducing errors caused by incomplete information, and supporting reliable clinical decision-making.

The course equips participants with practical tools to identify documentation gaps, analyze healthcare data, understand clinical workflows, and evaluate how documentation quality affects patient outcomes. It provides real case studies and hands-on activities to ensure that participants gain practical skills that can be applied immediately in their workplace.
