Lean Six Sigma Project Management Course

Code: PM32 From: 24 - 28 May 2027 City: Lagos (Nigeria) Fees: 4200 Pound

Introduction

Organizations across all industries are under increasing pressure to improve operational performance, deliver higher-quality products and services, reduce waste, and maximize the value of available resources. Achieving these objectives requires more than traditional project management practices. It demands a structured methodology that combines process improvement, quality management, and data-driven decision-making. Lean Six Sigma has become one of the world's most widely adopted approaches for achieving operational excellence and sustainable business performance.

The Lean Six Sigma Project Management Course provides a comprehensive introduction to integrating Lean principles with Six Sigma methodologies to improve project outcomes and organizational efficiency. Participants will explore how process improvement initiatives support project success, reduce operational variation, eliminate non-value-added activities, and strengthen quality management practices.

Throughout the course, participants will develop a solid understanding of the Define, Measure, Analyze, Improve, and Control DMAIC methodology, process mapping, performance measurement, root cause analysis, waste reduction, continuous improvement, risk management, and operational excellence. The course also demonstrates how Lean Six Sigma principles can be applied across government organizations, oil and gas companies, financial institutions, telecommunications, healthcare, manufacturing, and service industries to improve business performance and support strategic objectives.
