Introduction

This course answers a simple yet critical question: "What is the best way to help organize and assist a group of professionals focus on achieving a collective objective?" The aim of this course is to enable participants to maximize the efficiency and effectiveness of their organizational structure in alignment with strategic objectives, environmental complexity, and workforce availability and readiness to perform.

Organizational Development OD is a systematic and planned approach to improving an organization's overall effectiveness, performance, culture, and ability to adapt to change. It focuses on people, processes, culture, leadership, and organizational capabilities to support sustainable organizational improvement.

Organizational Design, on the other hand, focuses specifically on creating or redesigning the organizational structure, including roles, responsibilities, reporting relationships, functions, decision-making, and coordination mechanisms. While Organizational Development focuses on improving the organization as a whole and its ability to evolve and perform effectively, Organizational Design focuses on how the organization is structured to achieve its strategic objectives.

Understanding the difference between Organizational Development and Organizational Design is essential for HR and organizational professionals, as both disciplines are closely connected. Organizational Development can identify organizational improvement and change requirements, while Organizational Design translates strategic and organizational requirements into an effective structure, roles, processes, and operating mechanisms.

Organizational design is perceived as a collective responsibility, where Human Resources HR professionals facilitate and guide the process. With this in mind, the course will provide a comprehensive toolkit to enable HR staff to facilitate and guide the organizational design process systematically. The toolkit includes resources such as brainstorming charts used during the analysis stage, design templates, and facilitation guides, including agendas for working sessions. In other words, this course addresses the functional needs of participants and ensures their capability to implement the concepts learned.
