Foundations of IT Service Management: Service Value, Delivery & Continuous Improvement

Ref: 3254831_322760 **Date:** 29 March – 2 April 2027 **Location:** Paris (France) **Fees:** 5900 GBP

Introduction

The Foundations of IT Service Management: Service Value, Delivery & Continuous Improvement Course is designed to provide participants with a comprehensive introduction to the principles, concepts, and practices of modern IT Service Management. As organizations increasingly depend on technology to support business operations, deliver services, and drive innovation, the need for structured service management practices has become essential for achieving operational excellence, service reliability, and customer satisfaction.

This course helps professionals understand how IT services create value, support organizational objectives, and contribute to business success. Participants will gain practical knowledge of service management concepts, service delivery models, service value creation, governance principles, performance management approaches, and continual improvement methodologies that enable effective and efficient service operations.

Through a combination of interactive discussions, practical exercises, and real-world examples, participants will develop a strong foundation in service management practices and learn how to improve service quality, enhance operational efficiency, strengthen stakeholder engagement, and support organizational goals through effective service delivery.

Course Objectives

By the end of this course, participants will be able to:

- Understand the fundamental concepts of modern IT Service Management.
- Explain the purpose and value of effective service management.
- Understand the key elements that contribute to successful service delivery.
- Explore the organizational, technological, operational, and stakeholder factors that influence service performance.
- Identify the principles that support effective service management.
- Understand core service management practices and their role in operational excellence.
- Analyze how IT services contribute to business value creation.
- Apply service management concepts to improve operational effectiveness.
- Understand continual improvement approaches within service environments.
- Strengthen alignment between technology services and organizational objectives.
- Improve collaboration between service providers, customers, and stakeholders.
- Support service quality and customer satisfaction initiatives.
